■ Operating Timing Diagram

※The waveforms of “Operation indicator” and “Transistor output” are for Light ON operation. They are reversed for Dark ON operation.

■ Mounting and Sensitivity Adjustment

◎ Installation

Use M2 bolts to install this sensor, and keep the tightening torque under 0.3N·m.

※Exercise caution. Do not apply excessive impact to the unit or bend the cable section. The inside unit may be wet.

※Cautions during installation of convergent reflective type

- 1) Make sure that the sensing side of this sensor is parallel to the surface of each object. 
- 2) Make sure to install the sensor after carefully considering the moving direction of the sensing objects. Refer to the illustration below.

◎ Optical axis adjustment

● Through-beam type

Set the emitter and the receiver facing each other. Adjust the emitter or the receiver up, down, left, right and fix the unit at the center point of where the stability indicator is operating.

● Retroreflective type

Place the sensor and the reflector (MS-6) or reflective tape facing each other. Adjust the reflector up, down, left, right and fix the reflector at the center position where the stability indicator is operating. Make sure that the sensing side of the sensor is parallel to the surface of the reflector.

※Please use reflective tape (MST Series) for where a reflector is not installed.

Ultra-compact Amplifier Built-in Type

● Convergent reflective type

Place the sensing target, then adjust the sensor up, down, left, right and fix the sensor at the center position where the stability indicator is operating. Make sure that the sensing side of the sensor is parallel to the surface of each object.

◎ Conditions of min. sensing target and installations (retroreflective type)

When installing the retroreflective photoelectric sensor, be sure to check the moving direction of sensing targets. Please refer to the [Figure 1, 2].

As the [Figure 3], please consist the center between the sensor and the reflector (MS-6) or reflective tape, and check the stable Light ON operations (operation (red) / stability (green) indicators turn ON). Min. sensing target is detected 100mm away from the sensor (example).

[Figure 1]

[Figure 2]

[Figure 3]

※The size of minimum sensing target will vary by the installation environment of the reflector (MS-6) and the sensing position and material of the sensing target.

■ Accessory (sold separately)

● Slit (model: BTS1M-ST)

● Min. sensing target and max. sensing distance by slit's Ø when attach the slit at an emitter.

Slit Ø	Min. sensing target	Max. sensing distance
Ø1	Opaque materials of Min. Ø1.6	500mm

※This slit is for BTS1M-TDT□□ only.

※4 pieces are packed and sold separately.

※This slit is sticker for attachment, please remove the dirt on lens of photoelectric sensor before using it.

After attach the slit, remove the front protection film.

■ Reflectivity by Reflective Tape Model

MST-50-10 (50×50mm)	95%
MST-100-5 (100×100mm)	100%
MST-200-2 (200×200mm)	100%

※This reflectivity is based on the reflector (MS-6).

※Reflectivity may vary depending on usage environment and installation conditions.

The sensing distance and minimum sensing target size increase as the size of the tape increases. Please check the reflectivity before using reflective tapes.

※For using reflective tape, installation distance should be min. 20mm.
