**1. FUNCTIONS & FEATURES**

Display Format : 128x64 Dots  
LCD Mode : FSTN / Positive Mode/ Transflective  
Viewing Direction : 6 o'clock  
Driving Scheme : 1/65 Duty cycle, 1/9 Bias  
Power Supply Voltage (V<sub>DD</sub>) : 3.3Volt (typ.)  
LCD Driving Voltage (VLCD) : 9.0Volt (Typ. Reference Voltage)  
Operation Temperature : -20~70°C  
Storage Temperature : -30~80°C  
Backlight : LED, White, Lightguide  
RoHS compliant.

**2. MECHANICAL SPECIFICATIONS**

Module Size : 52.20 x 32.70 x 5.30 mm  
Viewing Area : 41.00 x 22.0 mm  
Dot Pitch : 0.296x 0.296 mm  
Dot Size : 0.276x 0.276 mm

- Specification:
- 1). Driving Duty: 1/65, Bias: 1/9, VLCD: 9.0V, VDD: 3.3V
  - 2). Viewing Direction: 6 O'clock
  - 3). Display mode: FSTN/Positive/Transflective
  - 4). Operating temp.: -20°C ~ +70°C  
Storage temp.: -30°C ~ +80°C
  - 5). IC: ST7565R (or compatible)
  - 6). Backlight: EDGE White (1 Dies, If=15mA, Vf=3.1±0.2V)
  - 7). Dimensions with mark "\*" are important, with mark "(") are referenced
  - 8). All the raw materials are RoHS compliant

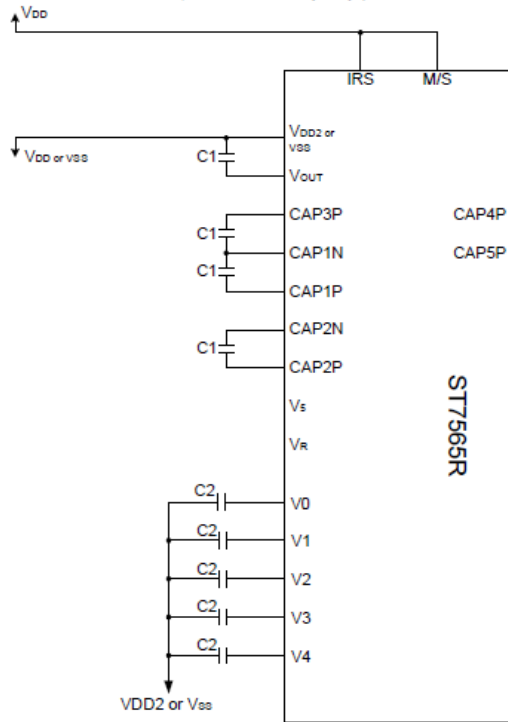

### 5. LCD Driving voltage generator and bias reference circuit

When the voltage regulator internal resistor is not used.

(Example where  $V_{DD2}=V_{DD}$ , with 4x step-up)

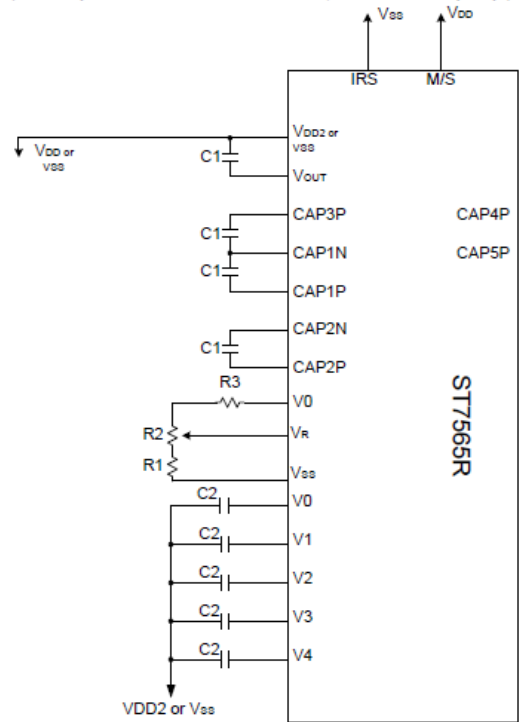

(1) When the voltage regulator internal resistor is used.

(Example where  $V_{DD2} = V_{DD}$ , with 4x step-up)

(2) When the voltage regulator internal resistor is not used.

(Example where  $V_{DD2} = V_{DD}$ , with 4x step-up)

Item	Set value	units
c1	1.0 to 4.7	uF
c2	0.1 to 4.7	uF

C1 and C2 are determined by the size of the LCD being driven

\* 1. Because the VR terminal input impedance is high, use short leads and shielded lines.

\* 2. C1 and C2 are determined by the size of the LCD being driven. Select a value that will stabilize the liquid crystal drive voltage.

Example of the Process by which to Determine the Settings:

- Turn the voltage regulator circuit and voltage follower circuit ON and supply a voltage to VOUT from the outside.
- Determine C2 by displaying an LCD pattern with a heavy load (such as horizontal stripes) and selecting a C2 that stabilizes the liquid crystal drive voltages (V0 to V4). Note that all C2 capacitors must have the same capacitance value.
- Next turn all the power supplies ON and determine C1.

**6. PIN DESCRIPTION**

1,2	NC	No connection
3	/CS1	This is the chip select signal
4	/RES	The RESET signal
5	A0	This is connected to the least significant bit of the normal MPU address bus, and it determines whether the data bits are data or a command
6	W/R	Write signal
7	/RD	Enable signal
8~15	D0~D7	Data bus lines
16	VDD	Power supply for logic(+3.3V)
17	VSS	Power ground
18~23	VOUT,CAP3P, CAP1N,CAP1P, CAP2P,CAP2N	DC/DC voltage converter
24	NC	No connection
25~29	V1-V0	LCD driver supplies voltages.
30	VR	Voltage adjustment pad. Applies voltage between V0 and VSS using a resistive divider.
31	NC	No connection
32	C86	This is the MPU interface switch terminal C86 = "H": 6800 Series MPU interface C86 = "L": 8080 Series MPU interface
33	P/S	This is the parallel data input/4-line SPI data input switch terminal. P/S = "H": Parallel data input. P/S = "L": 4-line SPI data input.
34	NC	No connection
35	IRS	This terminal selects the resistors for the V0 voltage level adjustment. IRS = "H", Use the internal resistors IRS = "L", Do not use the internal resistors
36	NC	No connection

## 7. MAXIMUM ABSOLUTE LIMIT

### Maximum Ratings (Voltage Reference to VSS)(for IC)

Unless otherwise noted, V<sub>SS</sub> = 0V

Parameter		Symbol	Conditions	Unit
Power Supply Voltage		VDD	-0.3 ~ 3.6	V
Power supply voltage (VDD standard)		VDD2	-0.3 ~ 3.6	V
Power supply voltage (VDD standard)		V0, VOUT	-0.3 ~ 13.5	V
Power supply voltage (VDD standard)		V1, V2, V3, V4	-0.3 to V0	V
Operating temperature		TOPR	-20to+70	°C
Storage temperature	Bare chip	TSTR	-30to+80	°C

Figure 30

#### Notes and Cautions

1. The VDD2, V0 to V4 and VOUT are relative to the VSS = 0V reference.
2. Insure that the voltage levels of V1, V2, V3, and V4 are always such that VOUT ≥ V0 ≥ V1 ≥ V2 ≥ V3 ≥ V4.
3. Permanent damage to the LSI may result if the LSI is used outside of the absolute maximum ratings. Moreover, it is recommended that in normal operation the chip be used at the electrical characteristic conditions, and use of the LSI outside of these conditions may not only result in malfunctions of the LSI, but may have a negative impact on the LSI reliability as well.

## **14. PRECAUTION FOR USING LCD/LCM**

After reliability test, recovery time should be 24 hours minimum. Moreover, functions, performance and appearance shall be free from remarkable deterioration within 50,000 hours(average) under ordinary operating and storage conditions room temperature ( $20\pm 8^{\circ}\text{C}$ ), normal humidity (below 65% RH), and in the area not exposed to direct sun light. Using LCM beyond these conditions will shorten the life time.

### Precaution for using LCD/LCM

LCD/LCM is assembled and adjusted with a high degree of precision. Do not attempt to make any alteration or modification. The followings should be noted.

#### **General Precautions:**

1. LCD panel is made of glass. Avoid excessive mechanical shock or applying strong pressure onto the surface of display area.
2. The polarizer used on the display surface is easily scratched and damaged. Extreme care should be taken when handling. To clean dust or dirt off the display surface, wipe gently with cotton, or other soft material soaked with isopropyl alcohol, ethyl alcohol or trichlorotrifluoroethane, do not use water, ketone or aromatics and never scrub hard.
3. Do not tamper in any way with the tabs on the metal frame.
4. Do not made any modification on the PCB without consulting DISPLAY.
5. When mounting a LCM, make sure that the PCB is not under any stress such as bending or twisting. Elastomer contacts are very delicate and missing pixels could result from slight dislocation of any of the elements.
6. Avoid pressing on the metal bezel, otherwise the elastomer connector could be deformed and lose contact, resulting in missing pixels and also cause rainbow on the display.
7. Be careful not to touch or swallow liquid crystal that might leak from a damaged cell. Any liquid crystal adheres to skin or clothes, wash it off immediately with soap and water.

#### **Static Electricity Precautions:**

1. CMOS-LSI is used for the module circuit; therefore operators should be grounded whenever he/she comes into contact with the module.
2. Do not touch any of the conductive parts such as the LSI pads; the copper leads on the PCB and the interface terminals with any parts of the human body.
3. Do not touch the connection terminals of the display with bare hand; it will cause disconnection or defective insulation of terminals.
4. The modules should be kept in anti-static bags or other containers resistant to static for storage.
5. Only properly grounded soldering irons should be used.
6. If an electric screwdriver is used, it should be grounded and shielded to prevent sparks.

7. The normal static prevention measures should be observed for work clothes and working benches.
8. Since dry air is inductive to static, a relative humidity of 50-60% is recommended.

**Soldering Precautions:**

1. Soldering should be performed only on the I/O terminals.
2. Use soldering irons with proper grounding and no leakage.
3. Soldering temperature:  $350^{\circ}\text{C} \pm 10^{\circ}\text{C}$
4. Soldering time: 3 to 4 second.
5. Use eutectic solder with resin flux filling.
6. If flux is used, the LCD surface should be protected to avoid spattering flux.
7. Flux residue should be removed.

**Operation Precautions:**

1. The viewing angle can be adjusted by varying the LCD driving voltage  $V_o$ .
2. Since applied DC voltage causes electro-chemical reactions, which deteriorate the display, the applied pulse waveform should be a symmetric waveform such that no DC component remains. Be sure to use the specified operating voltage.
3. Driving voltage should be kept within specified range; excess voltage will shorten display life.
4. Response time increases with decrease in temperature.
5. Display color may be affected at temperatures above its operational range.
6. Keep the temperature within the specified range usage and storage. Excessive temperature and humidity could cause polarization degradation, polarizer peel-off or generate bubbles.
7. For long-term storage over  $40^{\circ}\text{C}$  is required, the relative humidity should be kept below 60%, and avoid direct sunlight.

**Limited Warranty**

DISPLAY LCDs and modules are not consumer products, but may be incorporated by DISPLAY's customers into consumer products or components thereof, DISPLAY does not warrant that its LCDs and components are fit for any such particular purpose.

1. The liability of DISPLAY is limited to repair or replacement on the terms set forth below. DISPLAY will not be responsible for any subsequent or consequential events or injury or damage to any personnel or user including third party personnel and/or user. Unless otherwise agreed in writing between DISPLAY and the customer, DISPLAY will only replace or repair any of its LCD which is found defective electrically or visually when inspected in accordance with DISPLAY general LCD inspection standard . (Copies available on request)
2. No warranty can be granted if any of the precautions state in handling liquid crystal display above has been disregarded. Broken glass, scratches on polarizer mechanical damages as well as defects that are caused accelerated environment tests are excluded from warranty.
3. In returning the LCD/LCM, they must be properly packaged; there should be detailed description of the failures or defect.
