## Judgment Criteria

Measuring item	Symbol	Measuring	failure criteria
Forward voltage	VF	IFP=1000mA	X < S×1.2
Luminous intensity	IV	IFP=1000mA	S×0.5 < X

S means the initial value. X means the tested sample Value.

Note: Measurement shall be taken between 2 hours and 24 hours, having returned the test pieces to the normal ambient conditions after the completion of each test.

8. Packing Specifications

8-1. Moisture-proof Packing

To prevent moisture absorption during transportation and storage, reels are packed in aluminum envelopes which contain a desiccant.

Moisture/Reflow sensitivity classification  
IPC/JEDEC J-STD-020C:Level 1.

8-2. Storage

To prevent moisture absorption, it is strongly recommended that reels (in bulk or taped) should be stored in the dry box (or the desiccator) with a desiccant as the appropriate storage place. If not, the following is needed.

Temperature: <30 °C  
Humidity: <85%RH

The devices should be mounted as soon as possible after unpacking. If you store the unpacked reels, please store them in the dry box or seal them into the envelop again.

8-3. Baking

If the devices have been stored in the above storage condition (8-2.Storage) over 1year, it should be baked under the following conditions.

Baking conditions: 60°C×12 hours or more (reeled one)  
100°C×48 minutes or more (loose one)

9. Precautions

9-1. Soldering

(1) Manual soldering

- 1) Solder of 96.5Sn 3Ag 0.5Cu is recommended.
  - 2) Before soldering every time, make baking to units. By manual soldering, it is the possibility of crack due to the moisture absorption in the resin portion.
  - 3) Use a soldering iron of 25W or smaller. Adjust the temperature of the soldering iron below 350°C.
  - 4) Force or stress must not be applied to the resin portion while soldering.
  - 5) Finish soldering within 3 seconds.
  - 6) Handle the devices only after temperature is cooled down.
- Note) Manual Hot Gas Soldering is not recommended.

(2) Reflow soldering

- 1) Following soldering paste is recommended  
 Melting temperature: 216 ~ 220°C.  
 Composition: 96.5Sn 3Ag 0.5Cu
- 2) The temperature profile at the top surface of the parts is recommended as shown below.
- 3) It is requested that products should be handled after their temperature has dropped down to the normal room temperature

9-2. Washing

- (1) When washing after soldering is needed, following conditions are requested.
  - a) Washing solvent: Pure Water
  - b) Temperature, time: 50°C or less × 30 seconds max. or 30°C or less × 3 minutes max.
  - c) Ultrasonic washing: 300W or less

9-3. Other directions

- (1) It is requested to avoid any stress added to the resin portion while it is heated.
- (2) It is requested to avoid any friction by sharp metal nail etc. to the resin portion.

10. Designing precautions

- (1) The current limiting resistor should be placed in the circuit so that is driven within its rating. Also avoid reverse voltage (over-current) applied instantaneously when ON or OFF.
- (2) When pulse driving current is applied, average current consumption should be within the rating. Also avoid reverse voltage applied when put off.
- (3) Recommended soldering pattern

The above dimensions are not the one which guarantee the performance of mountability. The use of the above pattern is recommended to use after deep study at your site.

- (4) When assembling the circuit board into the finished products, care must be taken to avoid the component parts from touching other parts.
- (5) When using multiple LEDs, it is required to connect a current limiting resistor on each path which the current flows to the LEDs.
