

[VI01 Function]

VI01 can measure the Power Bank's output voltage (during 4.5V-6.0V) and current (during 0-2.5A).

the display precision is $\pm 0.02V/\pm 0.02A$.

[VI01 Use Method]

the LCD displays the no-load voltage and current.

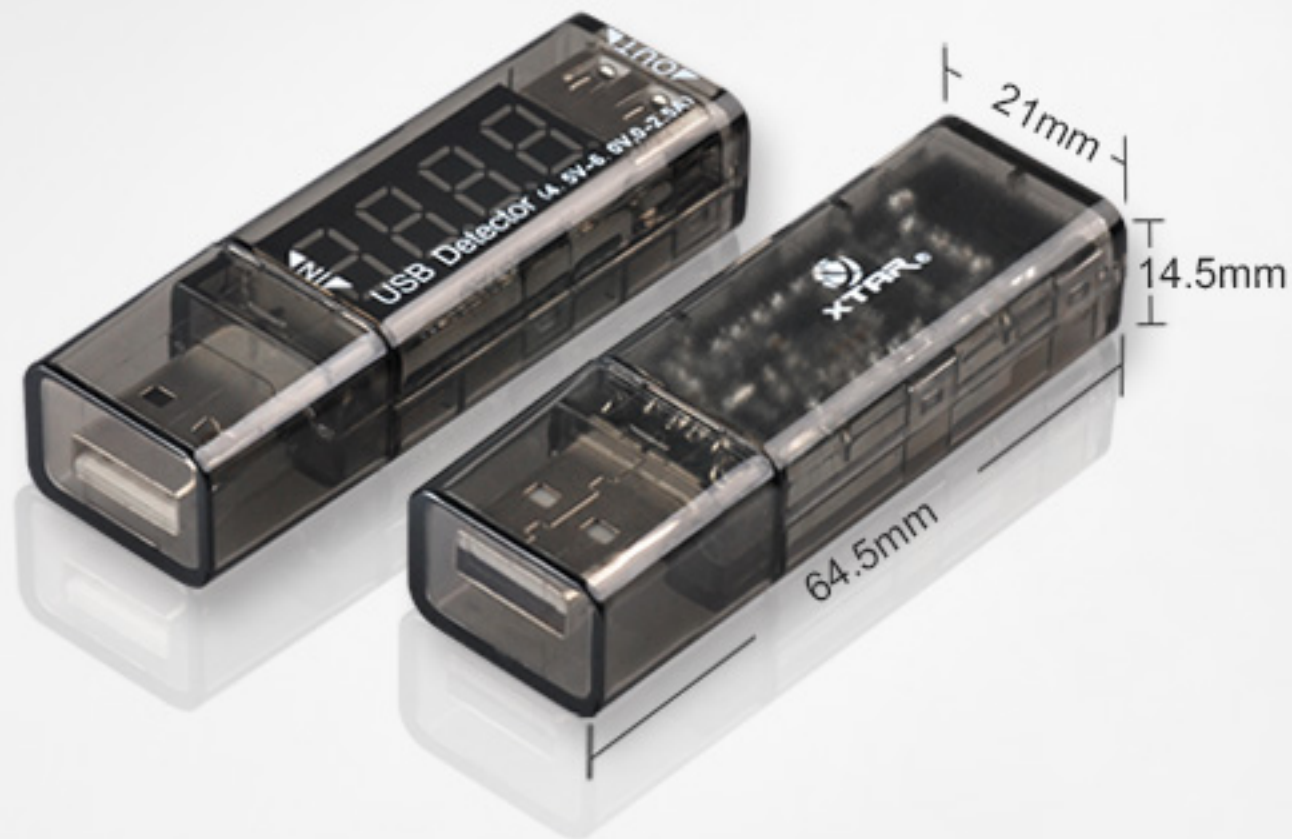

Then, connect the mobile devices input port with VI01 “out” sign port
LCD will display the load voltage and load current.

[VI01 Test]

VI01 displays voltage and current in turns, the interval time is 5 seconds.

The default display is voltage.

[Size]

Size: 64.5*21*14.5mm.
