# 1. Introduction

## 1.1 Device Overview

### Features

- Low cost RFID Reader with Mifare Classic, Ultralight and NTAG2 support
- LED indicator of a tag presence in the antenna field
- Stand-alone mode (polling)
- Command interface via USB COM PORT with optional AES-128 encryption
- UART baud rate up to 921600 bps
- High transponder read and write speed
- -25°C to 85°C operating range
- 4 configurable GPIOs with interrupts
- 3 configurable PWMs
- Comparator
- ADC
- Current Output DAC
- AES-128 encryption engine
- Multiple internal reference voltages
- RoHS compliant

### Applications

- Access control
- Monitoring goods
- Approval and monitoring consumables
- Pre-payment systems
- Managing resources
- Contact-less data storage systems
- Evaluation and development of RFID systems

### Description

The USB-B1 v2 module is an expansion of the RFID B1 module - the second in an evolving family of 13.56 MHz sub assemblies from Eccel Technology Ltd (IB Technology). The product is designed with both embedded applications and computing / PLC platforms in mind. This product is an ideal design choice if the user wishes to add RFID capability to their design quickly and without requiring extensive RFID and embedded software expertise and time. An on board low power ARM microcontroller handles the RFID configuration setup and provides the user with a powerful yet simple command interface to facilitate fast and easy read/write access to the memory and features of the various transponders supported by this module.

## 1.2 System Overview

The USB-B1 v2 device is an extension of our RFID B1 module. Below, In Figure 1-1 the System Diagram is presented.

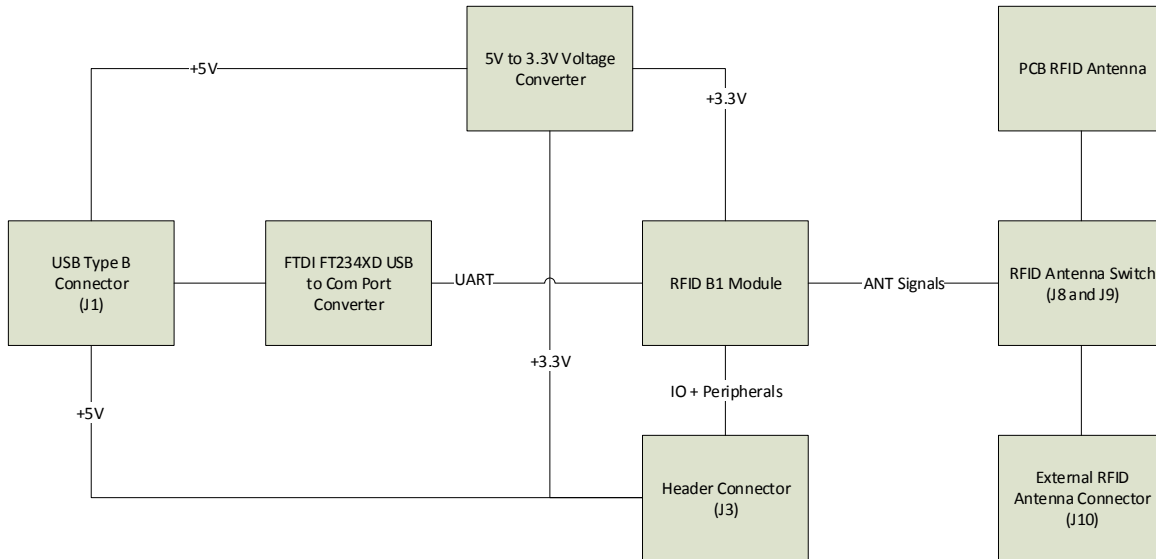

Figure 1-1 System Diagram

## 1.3 Features

Parameter	Typical Value
Range (dependent upon antenna dimensions and tuning, tag: Mifare 1k ISO card)	
a) PCB antenna (on board)	up to 50 mm
b) External PCB antenna 50x50mm (RFID-ANT1356-50x50-300 v1)	up to 70 mm
c) External PCB antenna 25x25mm (RFID-ANT1356-25x25-300 v1)	up to 40 mm
Nominal RF frequency	13.56 MHz
Supported tags	Mifare Classic, Ultralight, NTAG2
Time needed to read the whole tag memory (Classic 1k)	0.5 s
Time needed to write the whole tag memory (Classic 1k)	0.6 s
Width x Length	75 x 50 mm

Table 1-1

### 1.4 Connectors

Picture 1-1

In Picture 1-1 there are marked connectors available for the user when working with the USB-B1 v2 device. The connectors used on the USB-B1 v2 are described below.

#### 1.4.1 USB Connector (J1)

The device provides communication and power via USB connector J1. It is a micro USB Type B connector. The USB port, connected to the FTDI FT234XD chip provides USB to COM Port functionality. The user can configure the COM Port with a baud rate up to the maximum allowed by the RFID B1 module.

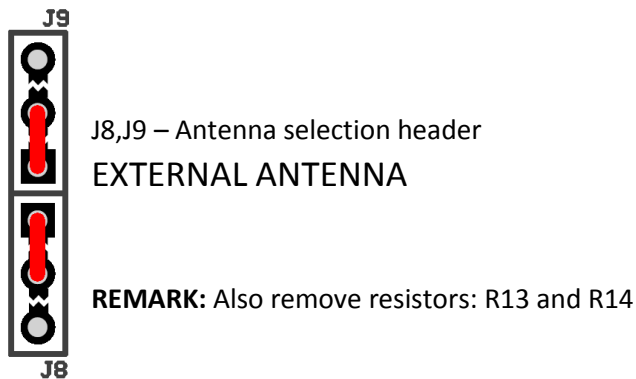

### 1.4.2 External Antenna Connector (J10)

The user has the option to work with an external RFID antenna connected to the USB-B1 v2 device. Connector J10 is where this should be connected. Eccel Technology Ltd provides a variety of RFID antennas which the user can use together with this device.

### 1.4.3 External / PCB Antenna Selection Connectors J8 and J9

To switch between the PCB antenna and an external antenna, two jumpers have to be used with the J8 and J9 connectors.

We recommend using our external antennas from series *RFID-ANT1356-50X50-xxx*, where *xxx* is the cable length in mm. They have a read range of about 70mm, 50x50mm in size and 300 or 800mm cable length. We can also design antennas with higher read range and custom dimensions on request.

More information about antennas: <http://www.eccel.co.uk/antennas/>

### 1.4.4 IO and Peripheral Configuration Header

The device PCB connects the pins on this header to all IOs and peripherals provided by the onboard RFID B1 module and a few pins are available providing +3.3V and GND signals.

- J3.1 – GPIO 0
- J3.2 – GPIO 2
- J3.3 – GPIO 1
- J3.4 – GPIO 3
- J3.5 – GND
- J3.6 – 3.3 V
- J3.7 – IDAC (Digital to Analog Converter with current-type output)
- J3.8 – GND
- J3.9 – COMP (Comparator positive input)
- J3.10 – GND
- J3.11 – ADC (Analog to Digital Converter input)
- J3.12 – GND
- J3.13 – GND
- J3.14 – nRST (nRESET – reset input signal – active low)
- J3.15 – nSLEEP (Output signal indicating the device is in Sleep Mode or Power Down Mode – active low)
- J3.16 – nPWRDN (Power Down Request input signal – active low)

### 1.5 LEDs

There are 3 LEDs installed on the board. Each of them has its own functionality:

- **LED1** – indicates that the reader is powered.
- **LED2** – indicates data transmission via UART interface. The Functionality of LED2 can be configured in the internal MTP (Multiple-Time Programmable) memory of the FT234XD chip using the software utility *FT\_PROG* which can be downloaded from the FTDI Utilities ([click here](#)).
- **LED3** – indicates a tag presence in the reader antenna field.

All of the LEDs are marked in green in Figure 4-1.

## 2. Electrical Characteristics

### 2.1 Test Conditions

Typical device parameters were measured at an ambient temperature  $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$  and using a power supply of  $5\text{V} \pm 5\%$ .

### 2.2 Absolute Maximum Ratings

Symbol	Parameter	Min	Max	Unit	Notes
$T_S$	Storage Temperature	-40	150	$^{\circ}\text{C}$	
$V_{\text{USBMAX}}$	USB Supply Voltage	0	5.5	V	
$V_{\text{IOMAX}}$	Input Pin Voltage	-0.3	3.5	V	
$I_{\text{IOMAX}}$	Output Pin Current	0	6	mA	
$I_{\text{ANT}}$	ANT1 and ANT2 Current	0	100	mA	Maximum continuous current. This depends upon the impedance of the circuit between ANT1 and ANT2 at 13.56MHz.

Table 2-1

### 2.3 Operating Conditions

Symbol	Parameter	Min	Max	Unit
$T_O$	Ambient Temperature	-25	85	$^{\circ}\text{C}$
$V_{\text{USB}}$	USB Supply Voltage	4.5	5.5	V
$V_{3V3}$	+3.3V Generated Voltage	3.235	3.365	V

Table 2-2

### 2.4 GPIO

Symbol	Parameter	Min	Typ	Max	Unit	Notes
$V_{\text{IOL}}$	Input Low Voltage			$0.3V_{3V3}$	V	
$V_{\text{IOH}}$	Input High Voltage	$0.7V_{3V3}$			V	
$I_{\text{IOMAX}}$	Output Pin Current			$\pm 6$	mA	
$I_{\text{IOLEAK}}$	Input Leakage Current		$\pm 0.1$	$\pm 40$	nA	High impedance IO connected to $V_{3V3}$ or GND.
$R_{\text{IOESD}}$	Internal ESD Series Resistor		200		$\Omega$	
$V_{\text{IOHYST}}$	IO Pin Hysteresis	$0.1V_{3V3}$			V	

Table 2-3

## 2.5 Antenna Output

Symbol	Parameter	Min	Typ	Max	Unit	Notes
$f_{ANT}$	Antenna Signal Frequency		13.56		MHz	$\pm 30$ ppm (-20°C - 70°C).
$f_{ANTAG}$	Antenna Signal Frequency Aging	0		3	ppm	At 25°C.
$V_{ANTH}$	Antenna High Level Output Voltage	$V_{3V3} - 0.64$			V	$I_{ANT} = 80\text{mA}$ .
$V_{ANTL}$	Antenna Low Level Output Voltage			0.64	V	$I_{ANT} = 80\text{mA}$ .
$I_{ANT}$	ANT1 and ANT2 Current	0	60	100	mA	Maximum continuous current. This depends upon the impedance of the circuit between ANT1 and ANT2 at 13.56MHz.

Table 2-4

## 2.6 Flash

Symbol	Parameter	Min	Typ	Max	Unit	Notes
$C_{FE}$	Flash Erase Cycles Before Failure	20000			cycles	
$T_{FDR}$	Flash Data Retention Time	10			years	For ambient temperature < 85°C
		20			years	For ambient temperature < 70°C

Table 2-5

## 2.7 IDAC

IDAC Parameters									
Precision				Source			Sink		
Range No	Range [ $\mu\text{A}$ ]	Step Size [ $\text{nA}$ ]	Nominal Current [ $\mu\text{A}$ ]	Current drop at Vdd - 100 mV [%]	Temperature coefficient [ $\text{nA}/^\circ\text{C}$ ]	Voltage coefficient [ $\text{nA}/\text{V}$ ]	Current drop at 200 mV [%]	Temperature coefficient [ $\text{nA}/^\circ\text{C}$ ]	Voltage coefficient [ $\text{nA}/\text{V}$ ]
0	<0; 1.6 >	50	0.85	0.79	0.3	11.7	0.3	0.2	12.5
1	(1.6; 4.7 >	100	3.2	0.75	0.7	38.4	0.32	0.7	40.9
2	(4.7; 16 >	500	8.5	1.22	2.8	96.6	0.62	2.8	94.4
3	(16; 64 >	2000	34	3.54	10.9	159.5	1.75	10.9	148.6

## 2.8 PWM

PWM Parameters				
Period		Frequency		
Minimum [ $\mu$ s]	Maximum [s]	Minimum [Hz]	Maximum [kHz]	Maximum Error [%]
4.81	3.19	0.313	207.9	3

Table 2-7

## 2.9 ADC

Symbol	Parameter	Min	Typ	Max	Unit	Notes
V <sub>ADCIN</sub>	Input Voltage Range	0		2.5	V	Internal 2.5V reference voltage used.
I <sub>ADCIN</sub>	Input Current			100	nA	
C <sub>ADCIN</sub>	Input Capacitance			2	pF	
R <sub>ADCIN</sub>	Input On Resistance	1			M $\Omega$	

Table 2-8

## 2.10 Comparator

Symbol	Parameter	Min	Typ	Max	Unit	Notes
V <sub>CMPIIN</sub>	Input Voltage Range	0		V <sub>3V3</sub>	V	
V <sub>CMPOFST</sub>	Offset Voltage	-12	0	12	mV	
V <sub>CMPHYST</sub>	Hysteresis		50		mV	

Table 2-9

### 3. Installation and operation

From the system and functionality point of view, the USB-B1 v2 device gives the same features as the RFID B1 module, and the user should refer to the RFID B1 User Manual when working with the USB-B1 v2. The FTDI chip expands the communication interface to the on-board RFID B1 module and allows the board to be connected to a computer and communicate with the device via a USB Com Port. Most systems have built-in drivers for such a Com Port.

For a quick test, the user can connect the USB-B1 v2 to a computer and then start the B1-client application which allows the user to test all features of the device. The B1-client along with its user guide can be downloaded from [here](#).

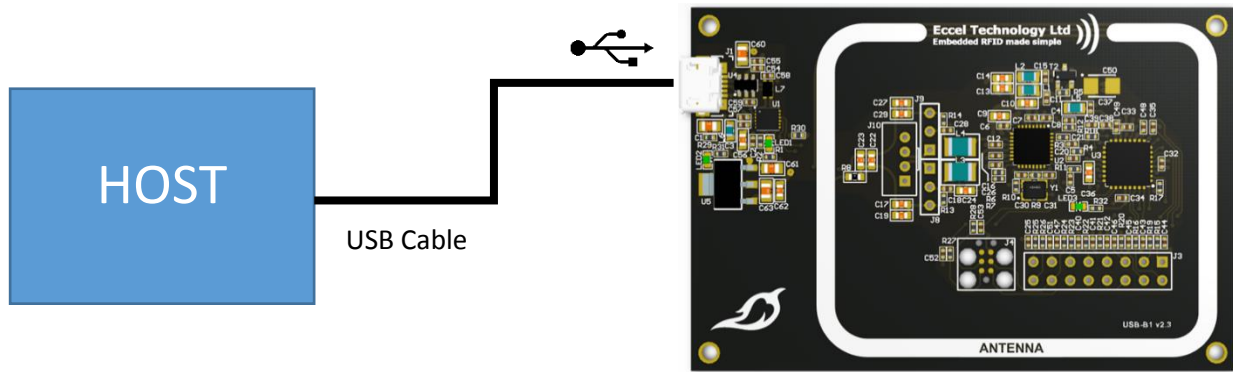

Figure 3-1 Connection to the host system.

The best read range can be achieved when the tag is parallel to the surface of the reader.

Figure 3-2 The correct way to read a RFID tag

The USB-B1 v2 can also operate in a stand-alone mode. The user can control all GPIO's and add tags to the whitelist (a list of defined tags). For easy configuration of polling parameters we provide the B1 Stand-Alone Configurator application which can be downloaded from [here](#). This application allows the user to simply search for a new tag, add it to the whitelist, configure polling parameters, enable/disable all of GPIOs and control them. For more information please refer to the RFID-B1 [User Manual](#).

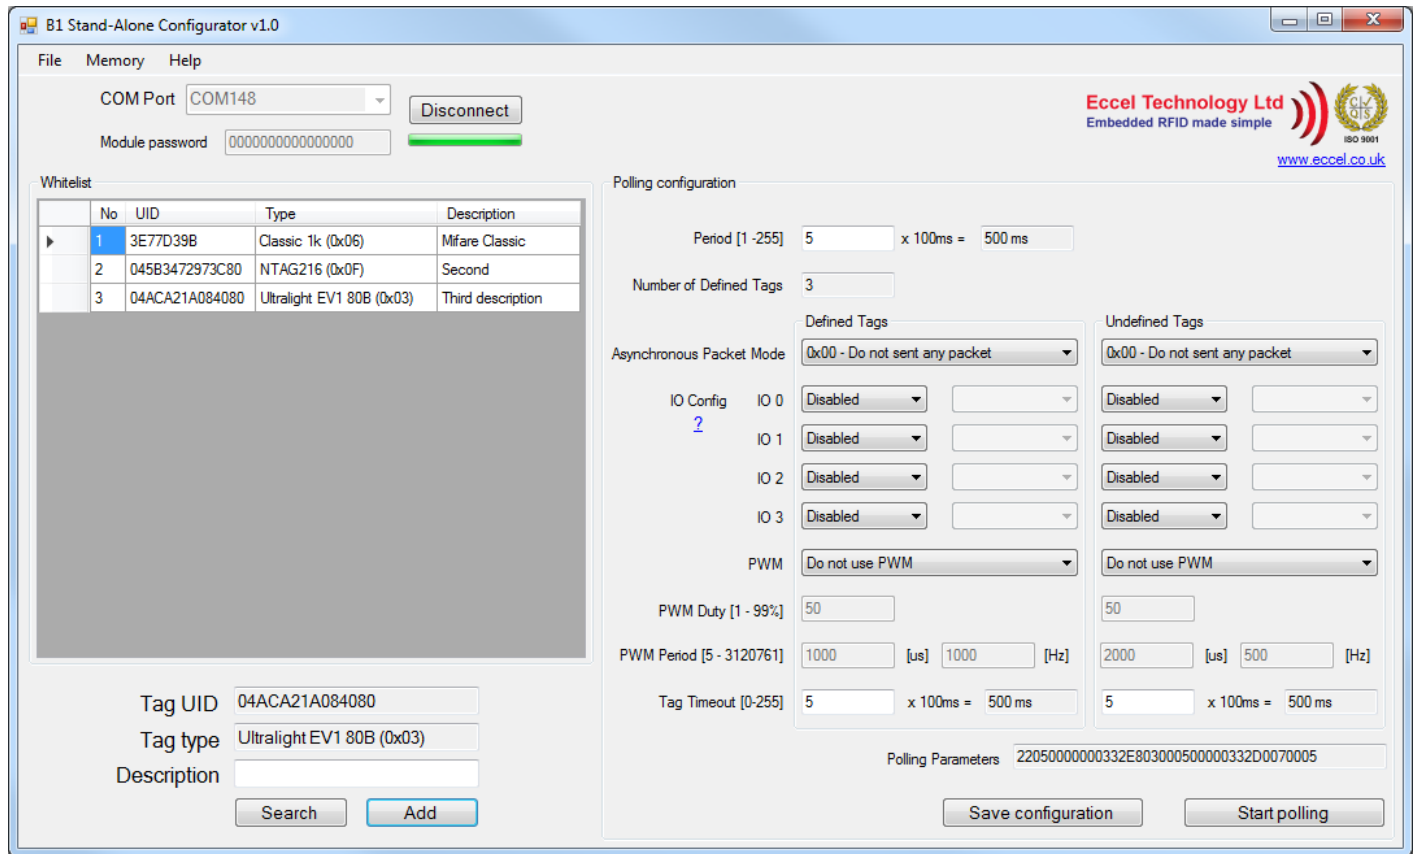

Figure 3-3 The main window of the B1 Stand-alone Configurator

**No responsibility is taken for the method of integration or final use of the B1 based modules**

More information about the B1 module and other products can be found at the Internet site:
